HiViz LED Lighting Releases a lifetime warranted surface-mount LED scene light for firefighters, designed by firefighters, with more light at a fraction of the cost.

Debuting at FDIC 2016, HiViz LED Lighting is yet again revolutionizing the LED Scene lighting industry. The FireTech "Guardian" Surface Mounted LED Scene light is designed to give superior light output, in the areas that are needed by firefighters and EMTs, for a fraction of the cost of the current competitive industry standard components.

The Guardian LED Scene light is offered in two versions; the Guardian (standard), and the Guardian "Elite." Both versions will use a 7.25"x 5.25" mounting hole layout which matches the most common 7x9 "900 series" fixtures in the industry. The Guardian LED Surface mount scene light will produce close to 6,500 measured lumens of light. It will also experience less than 15% thermal degradation after saturation. The Guardian is the perfect solution for your EMS fleet or when retrofitting fire apparatus on a conservative budget.

The Guardian "Elite" is designed with larger Rescue and Firefighting apparatus in mind. It will produce an earth shattering 12,500 MEASURED lumens, which compares favorably against fixtures commonly advertised in the fire industry as 20,000 lumens or more. To make this fixture even more applicable to the Fire/Rescue industry, half of the circuit boards in the Guardian series of LED Surface Mounted scene lights are articulated 10 degrees down, putting more of the light created at the source (lumens) on the intended target (lux).

In a recent interview, Sam Massa, President of HiViz LED Lighting and North Carolina Firefighter/EMT himself, put it in a nutshell: "Y'a know, I've been out there on the side of the road at 2AM, and its crazy to think you can respond to an incident in a \$1M apparatus, designed with the latest and greatest equipment the fire industry has to offer, and even so, still stand there on the side of the road not being able to see to do your job." Sam went on to mention how the Guardian LED Scene light was specifically engineered to optimize light placement near the apparatus, while still projecting ample light on to the areas farther from the rig. "Fire scenes are like fingerprints," he says. "There are never two alike. Because of that, we had to come up with a housing design that allowed us to emit light along different planes using separate optics, so that in any situation, the fixture would do its job of putting light exactly where it is needed."

Getting the performance and optics is only half the equation. The team at HiViz LED Lighting is so confident in the anticipated success and long-term service life of this fixture, they are backing it with their industry leading Limited LIFETIME Warranty.

For more info about the Guardian LED Scene light, stop by booth 3754 at FDIC (ICC) in Indianapolis IA, Apr 24-27 2017. If you're not at the show, please visit www.hivizleds.com or contact your nearest HiViz LED's "FireTech" dealer to schedule a demo.
